

Ingrid™ Pre-Engineered Solar

Melink makes solar power attractive, affordable and convenient for businesses, schools and homeowners with its pre-engineered solar PV system, **Ingrid™**. This 2 kW ground-mounted system has a sleek and elegant design to inspire your customers, employees and the public at large.

Conventional solar PV systems are custom designed and installed and as a result often cost-prohibitive for smaller applications. Ingrid offers customers the ability to use solar energy without having to install on the roof where it is hidden and hard to maintain and clean.

Ingrid not only provides energy but has been designed to be an architectural feature building owners can be proud to display. And in the growing green economy, it almost makes a statement that you are part of the solution for a sustainable future.

- Sleek, elegant design with fully hidden wiring
- Simple two-person installation
- Optimally sized for typical residential load
- Three year warranty on parts and labor
- Optional wireless display
- Agency listed
- Tracking ready (future enhancement)

Installing Ingrid

Melink Solar provides all the components required to install Ingrid from the ground up. Responsibilities of the installer include:

- Permitting and zoning
- Concrete pier foundation installation
- Assembly
- A/C wiring
- Commissioning
- Interconnection

Specifications

Power	2,160 Watts DC inverted to 208/240 Volts AC
Annual Output	2,200 - 3,000 kWh annually (depending on location)
Weight	620 pounds (excluding foundation)
Solar Panels	(12) 180 Watt DC monocrystalline silicon 25 year limited warranty
Inverter	Fronius IG Grid-tied 5 year limited warranty
